Summary

Backend-leaning full-stack engineer who designs and builds integration-heavy systems end to end. Currently building the Go microservices backend behind Matahari's multi-channel e-commerce platform, and owning the revenue engine of a hospitality SaaS as a freelancer. Works daily in agentic, AI-assisted development workflows and is eager to build AI-powered products. Computer Science graduate (GPA 3.82/4.00) with published ML research.

Professional Experience

Senior IT Developer Jul. 2026 – Present

MDS Retailing (Matahari) — E-Commerce Backend, Full-time, On-site *Tangerang, Indonesia*

- Top contributor to 4 of 7 services in the Go microservices backend (gRPC + REST) that centralizes catalog, inventory, customer accounts, and orders for Matahari.com, SUKO, and MaxMurah.
- Designed and built from scratch the integration service through which all vendor product, stock, image, and fulfillment data enters the platform, replacing separate per-channel integrations with one shared catalog.
- Shipped storefront product search with filters and facets (Typesense), a secure product image pipeline on object storage (MinIO), and a bulk stock sync designed for 60,000 SKUs every 5 minutes.
- Integrated customer accounts with the group loyalty CRM (OTP activation, password reset, loyalty profiles) and led a test-first restructure of the user service with enforced module boundaries.

Software Engineer (Freelance) May 2026 – Present

Karana OS — Full-stack, Remote *Bali, Indonesia*

- Own the pricing and revenue module of a multi-property hospitality platform end to end, from data model to UI (Next.js, TypeScript, Supabase PostgreSQL + Edge Functions).
- Led a major architecture design: structured 5 core tables, migrated the database, and wrote the pricing computation engine in TypeScript.
- Built every feature with Claude Code using spec-driven generation and multi-agent review and testing workflows, validating AI-generated code through automated reviews and tests before shipping.
- Sustained same-day turnaround on client feedback: 58+ revisions across 5 review cycles in 6 weeks.

Subject Coordinator Feb. 2023 – Feb. 2026

BINUS University — Software Laboratory Center, Full-time, On-site *Jakarta, Indonesia*

- Led 50+ lab assistants across OOP, Data Structures, Computer Vision, and other CS subjects, overseeing assignment design, exams, and code reviews.
- Trained 100+ assistant candidates on databases, OOP, and layered architecture; proposed new course modules that were adopted into the curriculum.

Student Researcher Feb. 2024 – Feb. 2025

BINUS University, Full-time, On-site *Jakarta, Indonesia*

- Built a speaker identification model comparing Neural Network vs. SVM classifiers on audio features; published "Forensic Voice Analysis: Neural Networks Versus Support Vector Machines for Speaker Identification".
- Developed an ML-based web attack detection model (SQLi/XSS) using Random Forest and SVM on preprocessed security logs; paper accepted: "Data Mod Security Processing for Machine Learning".

Programming Instructor & Teaching Assistant Feb. 2022 – May 2023

BINUS University Software Laboratory Center; BCA Learning Institute *Jakarta & Sentul, Indonesia*

- Taught 900+ students across C, Java, Python, JavaScript, SQL, Android, and web development; designed assignments and reviewed code submissions.

Projects

url-shortener | *Go, Gin, Redis, PostgreSQL, Docker, GitHub Actions* GitHub

- Production-ready URL shortening service with Redis caching, PostgreSQL, JWT auth, and a CI pipeline via GitHub Actions.

cinema-booking | *Go, Redis, Docker* GitHub

- Concurrency-safe seat reservation system using Redis distributed locks (TTL-bound per seat ID), with tests proving exactly one booking succeeds under simultaneous requests.

LinkhedIn | *Go, GraphQL (gqlgen), PostgreSQL, WebSocket, TypeScript, React, Firebase* GitHub

- Full-stack LinkedIn clone: Go + gqlgen GraphQL backend with GORM, paired with a React/TypeScript frontend and Firebase media storage.

Education

Bina Nusantara University 2021 – 2025

Bachelor of Computer Science GPA: 3.82 / 4.00 *Jakarta, Indonesia*

Technical Skills

Languages: Go, TypeScript, JavaScript, Python, Java, C, C++ (Familiar: Kotlin, PHP, C#)
AI & ML: Claude Code (agentic, AI-assisted development), scikit-learn, TensorFlow, pandas, NumPy
Backend: gRPC & Protocol Buffers, REST API design, microservices, Gin, gqlgen (GraphQL), GORM, Supabase (Auth, Storage, Edge Functions), Typesense, MinIO (S3)
Frontend: Next.js (App Router), React, TailwindCSS, Recharts, Flutter, Android
Databases: PostgreSQL, MySQL/MariaDB, Redis, SQL Server, MongoDB, Firebase
DevOps & Tooling: Git, GitLab, Docker / Docker Compose, GitHub Actions (CI/CD), Linux/Bash, Postman

Achievements & Publications

Published: Forensic Voice Analysis: Neural Networks Versus Support Vector Machines for Speaker Identification

Accepted: Data Mod Security Processing for Machine Learning

Best Teaching Index Award | *Software Laboratory Center, BINUS University* Odd Term 2022–2023

Participant — Senior Competitive Programming Contest | *COMPFEST 15* Oct. 2023
